

Hawridge and Cholesbury CofE School

Calculation Policy for Mathematics

Our Vision is for every child within the Hawridge & Cholesbury family to grow, flourish 'have life and ... have it more abundantly' (John 10:10 KLV); to be fascinated, rounded, eager to make a difference, spiritual and have high aspirations through Jesus' teaching and our curriculum.

We live our vision through our natural setting and our school values:

Respect Teamwork Responsibility Understanding Peace Honesty

Review date: July 2026

Adopted by the governing body on 16th July 2026

Next review: July 2029

Introduction

The following calculation policy has been devised to meet the requirements of the National Curriculum 2014 for the teaching and learning of mathematics, and is also designed to give pupils a consistent and smooth progression of learning in calculations across the school. At Hawridge & Cholesbury, teachers plan and deliver sequences of learning using the White Rose teaching scheme. This calculation policy reflects the teaching methods used within White Rose.

Please note that early learning in number and calculation in Reception follows the 'Development Matters' EYFS document, and this calculation policy is designed to build on progressively from the content and methods established in the Early Years Foundation Stage.

It is important that any type of calculation is given a real life context or problem solving approach to help build children's understanding of the purpose of calculation, and to help them recognise when to use certain operations and methods when faced with problems. This must be a priority within calculation lessons reflecting the aims of the National Curriculum 2014 that pupils should make rich connections across mathematical ideas to develop fluency, mathematical reasoning and competence in solving increasingly sophisticated problems.

Children will generally follow the programme of study at broadly the same pace; however it is vital that pupils are taught according to the stage that they are currently working at: they may need to continue working at a lower stage until they are secure enough to move on.

Aims

- To introduce children to the processes of calculation progressing from concrete, pictorial to abstract means
- To ensure children have a large proportion of time spent reinforcing number to build competency
- To support children in developing ways of recording to support their thinking and calculation methods
- To enable children to learn and interpret calculation signs
- To provide consistent models and images across the school to promote secure understanding
- To facilitate the use of tools to help children construct their understanding without promoting the over reliance of such tools
- To enable children to strengthen and refine their mental methods in order to develop informal and formal written methods and judge the accuracy of their calculations
- To support children in becoming more efficient and succinct in their recordings which will ultimately lead to efficient formal written methods
- To understand mathematical vocabulary to allow children to carry out calculations correctly
- To promote the correct use of age appropriate mathematical vocabulary to enable children to explain their thinking and build reasoning both verbally and in written format
- By the end of KS1, pupils should develop confidence and mental fluency with whole numbers, counting and place value. Pupils should know the number bonds to 20 and be precise in using and understanding place value.
- By the end of KS2, pupils should be fluent in written methods for all four operations, including long multiplication and division, and in working with fractions, decimals and percentages.

Mental and Oral Methods of Calculation

Early practical, oral and mental work lays the foundations by providing children with a good understanding of how the four operations build on efficient counting strategies and a secure knowledge of place value and number facts.

Reception	By the end of this stage, children must be able to recognise patterns, begin counting sequences and recognise one more or one less than any given number 0-100.
Year 1	Counting in multiples of 2, 10 and 5. By the end of the year 1, children can start learning the 2, 10 and 5 times tables. Count and read, to and across 100 forwards and backwards beginning with any given number (0-100).
Year 2	Recall 2, 10 and 5 multiplication tables.
Year 3	Recall 2,10 and 5 multiplication tables. Learn 3, 4 and 8 multiplication tables.
Year 4	Recall 2,10, 5, 3, 4 and 8 multiplication tables. Learn 6, 7, 9,11 and 12 multiplication tables.
Year 5/6	Continue to practise all multiplication tables up to 12 x 12.

Progression in Calculations

Addition

Objective and Strategies	Concrete	Pictorial	Abstract
Combining two parts to make a whole: part- whole model	   Use Numicon shapes to subitise numbers as well as explore aggregation (combining 2 or more parts to make a whole,) partitioning and number bonds 	   Use cubes to add two numbers together as a group or in a bar. 	$4 + 3 = 7$ $10 = 6 + 4$ Use pictures to add two numbers together as a group or in a bar.  Use the part-part whole diagram as shown above to move into the abstract.

Starting at the bigger number and counting on	 Start with the larger number on the bead string and then count on to the smaller number 1 by 1 to find the answer. 	$12 + 5 = 17$  Start at the larger number on the number line and count on in ones or in one jump to find the answer.	$5 + 12 = 17$ Place the larger number in your head and count on the smaller number to find your answer.
Regrouping to make 10.	$6 + 5 = 11$ 4 1 Start with the bigger number and use the smaller number to make 10.  Use a tens frame to show pairs which make 10.  $7 + 6 + 3 = 16$	 Use pictures or a number line. $3 + 9 =$ Regroup or partition the smaller number to make 10. $9 + 5 = 14$ 	$7 + 4 = 11$ If I am at seven, how many more do I need to make 10? How many more do I add on now?
Adding two or three	$4 + 7 + 6 = 17$		

single digits	Put 4 and 6 together to make 10. Add on 7.  Following on from making 10, make 10 with 2 of the digits (if possible) then add on the third digit. Make each number on separate ten frames before moving part of one number to make 10 on one of the ten frames. 	$5 + 3 = 8$  $5 + 3 = 8$  Use a number track or number line to count on from the largest number to find the total.	$4 + 7 + 6 = 10 + 7$ $= 17$ Combine the two numbers that make 10 and then add on the remainder.
Adding 2 digit numbers by regrouping to the nearest 10	Add by jumping to the nearest 10 and then adding the rest of the number either as a whole or by adding the tens and ones separately. $35 + 37 = 72$  $35 + 37 = 72$		$56 + 36 =$ $56 + 30 = 86$ $86 + 6 = 92$

Column method- no regrouping	$24 + 15 =$ Add together the ones first then add the tens. Use the Base 10 blocks first before moving onto place value counters.	After practically using the base 10 blocks and place value counters, children can draw the counters to help them to solve additions.	<u>Calculations</u> $21 + 42 =$ 21 + <u>42</u>
-------------------------------------	---	--	--

Column method- regrouping

Make both numbers on a place value grid.

Add up the units and exchange 10 ones for one 10.

Add up the rest of the columns, exchanging the 10 counters from one column for the next place value column until every column has been added.

This can also be done with Base 10 to help children clearly see that 10 ones equal 1 ten and 10 tens equal 100.

As children move on to decimals, money and decimal place value counters can be used to support learning.

Children can draw a pictorial representation of the columns and place value counters to further support their learning and understanding.

Show regrouping and exchanging ten ones for one ten using Base 10 representation.

Start by partitioning the numbers before moving on to clearly show the exchange below the addition.

$$\begin{array}{r} 20 + 5 \\ 40 + 8 \\ 60 + 13 = 73 \end{array}$$

$$\begin{array}{r} 536 \\ + 85 \\ \hline 621 \\ 11 \end{array}$$

As the children move on, introduce decimals with the same number of decimal places and different. Money can be used here.

$$\begin{array}{r} 72.8 \\ + 54.6 \\ \hline 127.4 \\ 11 \end{array}$$

$$\begin{array}{r} £ 23.59 \\ + £ 7.55 \\ \hline £ 31.14 \\ 11 \end{array}$$

$$\begin{array}{r} 23.361 \\ 9.080 \\ 59.770 \\ + 1.300 \\ \hline 93.511 \\ 212 \end{array}$$

Key Vocabulary: Add, count, on, addition, plus, more, sum, total, altogether, increase, regroup, exchange

Subtraction

Objective and Strategies	Concrete	Pictorial	Abstract
Taking away ones	Use physical objects, counters, cubes etc to show how objects can be taken away.  The concrete stage shows two examples of subtraction. On the left, there are 6 yellow circles arranged in two rows of three. Two circles are crossed out with black diagonal lines, leaving 4 circles. The equation $6 - 2 = 4$ is written next to them. On the right, there are 4 red cupcake counters arranged in a 2x2 grid. Two cupcakes are crossed out with black diagonal lines, leaving 2 cupcakes.	Cross out drawn objects to show what has been taken away.  The pictorial stage shows two examples of subtraction using triangles. On the left, there are 15 triangles arranged in three rows of five. Three triangles are crossed out with black diagonal lines, leaving 12 triangles. The equation $15 - 3 = 12$ is written below them. On the right, there are 8 triangles arranged in two columns of four. Two triangles are crossed out with black diagonal lines, leaving 6 triangles.	$18 - 3 = 15$ $8 - 2 = 6$

Counting back

Make the larger number in your subtraction. Move the beads along your bead string as you count backwards in ones.

$$13 - 4$$

Use counters and move them away from the group as you take them away counting backwards as you go.

Count back on a number line or number track

Start at the bigger number and count back the smaller number showing the jumps on the number line.

This can progress all the way to counting back using two 2 digit numbers.

Put 13 in your head, count back 4. What number are you at? Use your fingers to help.

Find the difference	Compare amounts and objects to find the difference. Use cubes to build towers or make bars to find the difference Use basic bar models with items to find the difference.	Count on to find the difference. Comparison Bar Models Lisa is 13 years old. Her sister is 22 years old. Find the difference in age between them. Draw bars to find the difference between 2 numbers.	Hannah has 23 sandwiches, Helen has 15 sandwiches. Find the difference between the number of sandwiches.
Part Whole Model	Link to addition- use the part whole model to help explain the inverse between addition and subtraction. If 10 is the whole and 6 is one of the parts. What is the other part? $10 - 6 =$	Use a pictorial representation of objects to show the part part whole model.	Move to using numbers within the part whole model.

Make 10	$14 - 9 =$  Make 14 on the ten frame. Take away the four first to make 10 and then takeaway one more so you have taken away 5. You are left with the answer of 9.	$13 - 7 = \boxed{6}$  Start at 13. Take away 3 to reach 10. Then take away the remaining 4 so you have taken away 7 altogether. You have reached your answer.	$16 - 8 =$ How many do we take off to reach the next 10? How many do we have left to take off?
Column method without regrouping	Use Base 10 to make the bigger number then take the smaller number away.  Show how you partition numbers to subtract. Again make the larger number first. 	Draw the Base 10 or place value counters alongside the written calculation to help to show working.  Calculations $\begin{array}{r} 54 \\ - 22 \\ \hline 32 \end{array}$  Calculations $\begin{array}{r} 176 \\ - 64 \\ \hline 112 \end{array}$	$47 - 24 = 23$ $\begin{array}{r} 40 + 7 \\ - 20 + 4 \\ \hline 20 + 3 \end{array}$ This will lead to a clear written column subtraction. 

Column method with regrouping

Use Base 10 to start with before moving on to place value counters. Start with one exchange before moving onto subtractions with 2 exchanges.

Make the larger number with the place value counters

Start with the ones, can I take away 8 from 4 easily? I need to exchange one of my tens for ten ones.

Now I can subtract my ones.

Now look at the tens, can I take away 8 tens easily? I need to exchange one hundred for ten tens.

Draw the counters onto a place value grid and show what you have taken away by crossing the counters out as well as clearly showing the exchanges you make.

When confident, children can find their own way to record the exchange/regrouping.

Just writing the numbers as shown here shows that the child understands the method and knows when to exchange/regroup.

Children can start their formal written method by partitioning the number into

clear place value columns.

Moving forward the children use a more compact method.

	 Now I can take away eight tens and complete my subtraction  Show children how the concrete method links to the written method alongside your working. Cross out the numbers when exchanging and show where we write our new amount.		This will lead to an understanding of subtracting any number including decimals. $ \begin{array}{r} 5 12 1 \\ 2 6 3 0 \\ - 2 6 5 \\ \hline 2 3 6 5 \end{array} $
--	---	--	---

Key Vocabulary:

Count back, take away, fewer, subtract, less, minus, difference between

Multiplication

Objective and Strategies	Concrete	Pictorial	Abstract
Doubling	Use practical activities to show how to double a number.  double 4 is 8 $4 \times 2 = 8$  Use Numicon to double a number.	Draw pictures to show how to double a number. Double 4 is 8 	 Partition a number and then double each part before recombining it back together.
Counting in multiples	  Count in multiples supported by concrete objects in equal groups.	 Use a number line or pictures to continue support in counting in multiples.	Count in multiples of a number aloud. Write sequences with multiples of numbers. 2, 4, 6, 8, 10 5, 10, 15, 20, 25, 30

Repeated addition	Use different objects to add equal groups.	There are 3 plates. Each plate has 2 star biscuits on. How many biscuits are there? 2 add 2 add 2 equals 6 5 + 5 + 5 = 15	Write addition sentences to describe objects and pictures. 2 + 2 + 2 + 2 + 2 = 10
Arrays- showing commutative multiplication	Create arrays using counters/ cubes to show multiplication sentences.	Draw arrays in different rotations to find commutative multiplication sentences. 4 × 2 = 8 2 × 4 = 8 2 × 4 = 8 4 × 2 = 8 Link arrays to area of rectangles.	Use an array to write multiplication sentences and reinforce repeated addition. 5 + 5 + 5 = 15 3 + 3 + 3 + 3 + 3 = 15 5 × 3 = 15 3 × 5 = 15

Grid Method

Show the link with arrays to first introduce the grid method.

x	10	3
4		

4 rows of 10

4 rows of 3

Move on to using Base 10 to move towards a more compact method.

4 rows of 13

x	T	U
		

Move on to place value counters to show how we are finding groups of a number. We are multiplying by 4 so we need 4 rows.

		

Calculations
4 x 126

Fill each row with 126.

Children can represent the work they have done with place value counters in a way that they understand.

They can draw the counters, using colours to show different amounts or just use circles in the different columns to show their thinking as shown below.

Start with multiplying by one digit numbers and showing the clear addition alongside the grid.

x	30	5
7	210	35

$$210 + 35 = 245$$

Moving forward, multiply by a 2 digit number showing the different rows within the grid method.

	10	8
10	100	80
3	30	24

X	1000	300	40	2
10	10000	3000	400	20
8	8000	2400	320	16

Add up each column, starting with the ones making any exchanges needed.

Then you have

your answer.

Column multiplication	Children can continue to be supported by place value counters at the stage of multiplication.  It is important at this stage that they always multiply the ones first and note down their answer followed by the tens which they note below.	Bar modelling and number lines can support learners when solving problems with multiplication alongside the formal written methods. 	Start with long multiplication, reminding the children about lining up their numbers clearly in columns. If it helps, children can write out what they are solving next to their answer. $ \begin{array}{r} 32 \\ \times 24 \\ \hline 128 \quad (4 \times 2) \\ 640 \quad (4 \times 30) \\ \hline 768 \end{array} $ $ \begin{array}{r} 7 \quad 4 \\ \times \quad 6 \quad 3 \\ \hline 212 \\ 420 \\ + 4200 \\ \hline 4662 \end{array} $ This moves to the more compact method. $ \begin{array}{r} 2 3 1 \\ 1342 \\ \times \quad 18 \\ \hline 10736 \\ 13420 \\ \hline 24156 \end{array} $
Key Vocabulary: Groups of, product, lots of, multiply, times,			

Division

Objective and Strategies	Concrete	Pictorial	Abstract
Sharing objects into groups	 I have 10 cubes, can you share them equally in 2 groups? 	Children use pictures or shapes to share quantities.  8 ÷ 2 = 4	Share 9 buns between three people. 9 ÷ 3 = 3
Division as grouping	Divide quantities into equal groups. Use cubes, counters, objects or place value counters to aid understanding.   96 ÷ 3 = 32  	Use a number line to show jumps in groups. The number of jumps equals the number of groups.  20 ? 20 ÷ 5 = ? 5 x ? = 20 Think of the bar as a whole. Split it into the number of groups you are dividing by and work out how many would be within each group.	28 ÷ 7 = 4 Divide 28 into 7 groups. How many are in each group?

Division within arrays	Link division to multiplication by creating an array and thinking about the number sentences that can be created.  Eg $15 \div 3 = 5$ $5 \times 3 = 15$ $15 \div 5 = 3$ $3 \times 5 = 15$	 Draw an array and use lines to split the array into groups to make multiplication and division sentences.	Find the inverse of multiplication and division sentences by creating four linking number sentences. $7 \times 4 = 28$ $4 \times 7 = 28$ $28 \div 7 = 4$ $28 \div 4 = 7$
Division with a remainder	$14 \div 3 =$ Divide objects between groups and see how much is left over 	Jump forward in equal jumps on a number line then see how many more you need to jump to find a remainder.  Draw dots and group them to divide an amount and clearly show a remainder. 	Complete written divisions and show the remainder using r. $29 \div 8 = 3 \text{ REMAINDER } 5$ ↑ ↑ ↑ ↑ dividend divisor quotient remainder

Dividing by 1 digit
(grouping)

Use grouping to support understanding of short division when dividing a 3 or 4-digit number by a 1-digit number.

$$856 \div 4 = 214$$

$$8,532 \div 2 = 4,266$$

quotient
divisor) dividend

Begin with divisions that divide equally with no remainder.

$$\begin{array}{r} 218 \\ 4 \overline{) 872} \end{array}$$

Move onto divisions with a remainder.

$$\begin{array}{r} 86 \text{ r } 2 \\ 5 \overline{) 432} \end{array}$$

Finally move into decimal places to divide the total accurately.

$$\begin{array}{r} 14.6 \\ 35 \overline{) 511.0} \end{array}$$

Divide multi-digits by 2 digits (short method)	When dividing up to 4- digits by 2-digits, written methods become the most accurate as concrete and pictorial representations become less effective. Children can write out multiples to support their calculations with larger remainders. Children will also solve problems with remainders where the quotient can be rounded as appropriate. <table><tr><td></td><td></td><td>0</td><td>3</td><td>6</td></tr><tr><td></td><td>12</td><td>4</td><td>4</td><td>3</td></tr><tr><td></td><td></td><td></td><td>7</td><td>2</td></tr></table> 432 ÷ 12 = 36 quotient divisor) dividend 7,335 ÷ 15 = 489 <table><tr><td></td><td>0</td><td>4</td><td>8</td><td>9</td></tr><tr><td>15</td><td>7</td><td>7</td><td>3</td><td>5</td></tr><tr><td></td><td></td><td></td><td>13</td><td>5</td></tr></table><table><tr><td>15</td><td>30</td><td>45</td><td>60</td><td>75</td><td>90</td><td>105</td><td>120</td><td>135</td><td>150</td></tr></table>			0	3	6		12	4	4	3				7	2		0	4	8	9	15	7	7	3	5				13	5	15	30	45	60	75	90	105	120	135	150
